

Symptoms

Some symptoms of sick building syndrome include headaches, dizziness, nausea, irritating eyes, nose and throat; a dry cough, dry or itchy skin, difficulty concentrating, fatigue, and sensitivity to odors.

Too much moisture in the basement is one of the main causes of sick building syndrome. High humidity levels, stagnant water in the basement, or moisture accumulating in ducts, humidifiers and drain pans can be a breeding ground for bacteria, molds, pollen and viruses.

So What's The Cure?

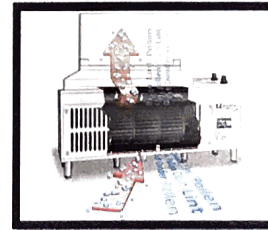

99.5% reduction
in mold spores
after EZ Breathe
installation

75% reduction
in radon levels
after EZ Breathe
installation

How it works....

The EZ Breathe™ ventilation unit operates in an economical, whisper quiet and maintenance-free way: ridding your home of damaging moisture through ventilation and relative humidity control, eliminating harmful VOC's, musty odors and indoor air pollutants; leaving you with a healthier home.

Controlling the moisture in the basement or crawlspace and keeping the relative humidity level at 50% or below, in conjunction with ventilating; will help control the contaminants that make it to the upper levels of the house, causing sick building syndrome.

- The EZ Breathe™ treats up to a 7000 square foot home of toxic air 8-10 times per day.
- 3 fan settings can be selected for either low, medium and high extraction.
- Humidistat dial allows you to select and operate the unit according to your personal preferences and lifestyle.
- Direct outside venting means no filters to change or clean.
- Operates for pennies a day.

The EZ Breathe™ replaces the damper basement air with the dryer upper living space air, reversing the natural stack effect.

Live healthier with EZ Breathe™

EZ Breathe™ results in a happy healthy home and occupants, by eliminating and deterring the problems below.

Did You Know?

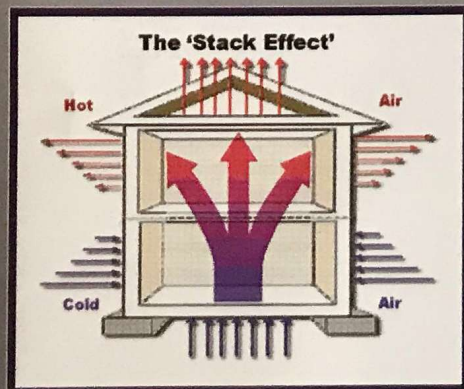

7-10 gallons of vapor can wick into your basement every day through the floor and/or walls...

- This increases the relative humidity in your basement
- A relative humidity greater than 50% can promote mould growth
- Create a musty smell
- Can cause appliances to rust and floor joists to rot
- Making you and your home sick

What causes sick home syndrome?

Nearly 50% of indoor air is pulled up from the lower levels of the house into the upper levels. This is what they call stack effect.

When the air in the basement or crawlspace is too humid or full of chemical or biological contaminants, it can cause "sick building syndrome."

Give your investment and families health, the protection they deserve, say "ABSOLUTELY" to having an EZ Breathe™ installed today.
