### CRAWL SPACE ENCAPSULATION

- Encapsulation Systems – stop mold growth, eliminate bacterial odor, reduce pest infestation & slow energy consumption

## How it works...

The EZ Breathe Ventilation System draws the stale, humid air down and out of the home at that level and expels it to the outside, creating a complete home air exchange about 6-10 times each day.

### Benefits of EZ Breathe...

- 99% reduction in mould spores
- Removes allergens
- Eliminates unpleasant odours
- Reduces moisture
- No maintenance
- \$2-\$4 a month to run

By removing allergens, contaminants, excess moisture, dust and pollutants from your home, EZ Breathe is able to help improve your air quality and ultimately your health.

### Water Disbursement System

Improper downspout drainage can lead to water seepage in your basement causing problems such as; soil erosion around house and improper grade, damage to the structure and integrity of the foundation and water infiltration. Water infiltration can result in high humidity levels in your basement; causing mould growth, dust mites, dry rot, rusting on appliances and family illness. Our water disbursement system disperses and directs run off water to a safe distance from your foundation. Benefits to this system include; underground design no tripping over unsightly above ground extensions, no more moving extensions to mow or maintain your lawn and eliminates roof water seepage into your basement, keeping your living space healthy and your investment protected. The cap protects against rodents and debris getting into the underground discharge system.
